

Engineering Design Service

Engineering Project Management Service

C2 Technology's

Engineering Project Management Service

is for businesses requiring project management support and delivery guidance.

Balancing the project constraints of cost, quality and schedule is a significant challenge to any project and therefore embedding a seasoned project manager into the team is integral in order to provide a successful outcome for all stakeholders.

Our commercially minded, industry experienced and certified project managers are able to ensure your projects are progressing to plan, budget and will deliver real value against the business opportunity, by using their wealth of engineering project management knowledge coupled with 'fit for purpose' implementation.

C2 Technology's Engineering Project Management

Service includes:

- Effective and efficient management of new and existing technology projects through the whole NPI/NPD stages from feasibility studies to site acceptance testing using PRINCE2 & Agile frameworks.
- Deployment of Project Management best practice including schedule management, risk management and Earned Value Management.
- Developing detailed project plans to guide clients, staff members and project teams and revising based on changing needs and requirements.
- Monitoring project performance to ensure timely delivery.
- Compiling and submitting project status reports to clients and stakeholders.
- Risk management (HAZID, HAZOP, FMECA etc.)
- Industry compliance certification activities and compliance strategy.
- Technology energy solution payback assessments.

Our clients have access to **Certified Project Managers** including Prince 2, PMP and Agile frameworks.
